01 / 12 — TITLE

A workspace for every kind of business operation

One workspace. Built around your business.

Describe how you work. EveryOps shapes the systems you need.

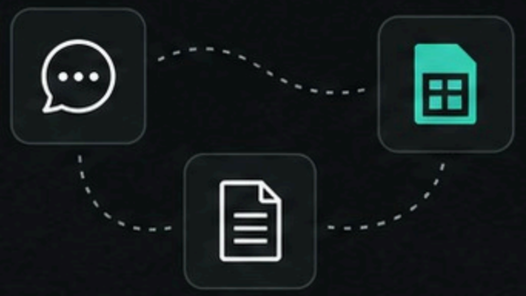

JO James Ocampo | JK Jared Karl Omen

EveryOps

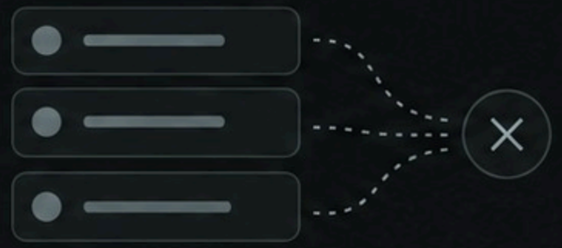

The business changes. The tools fall behind.

Small teams run connected work across disconnected tools.

Scattered records

Bookings in chat. Sales in spreadsheets. Tasks on paper.

Rigid workflows

Off-the-shelf tools force owners to adapt how they work.

Expensive changes

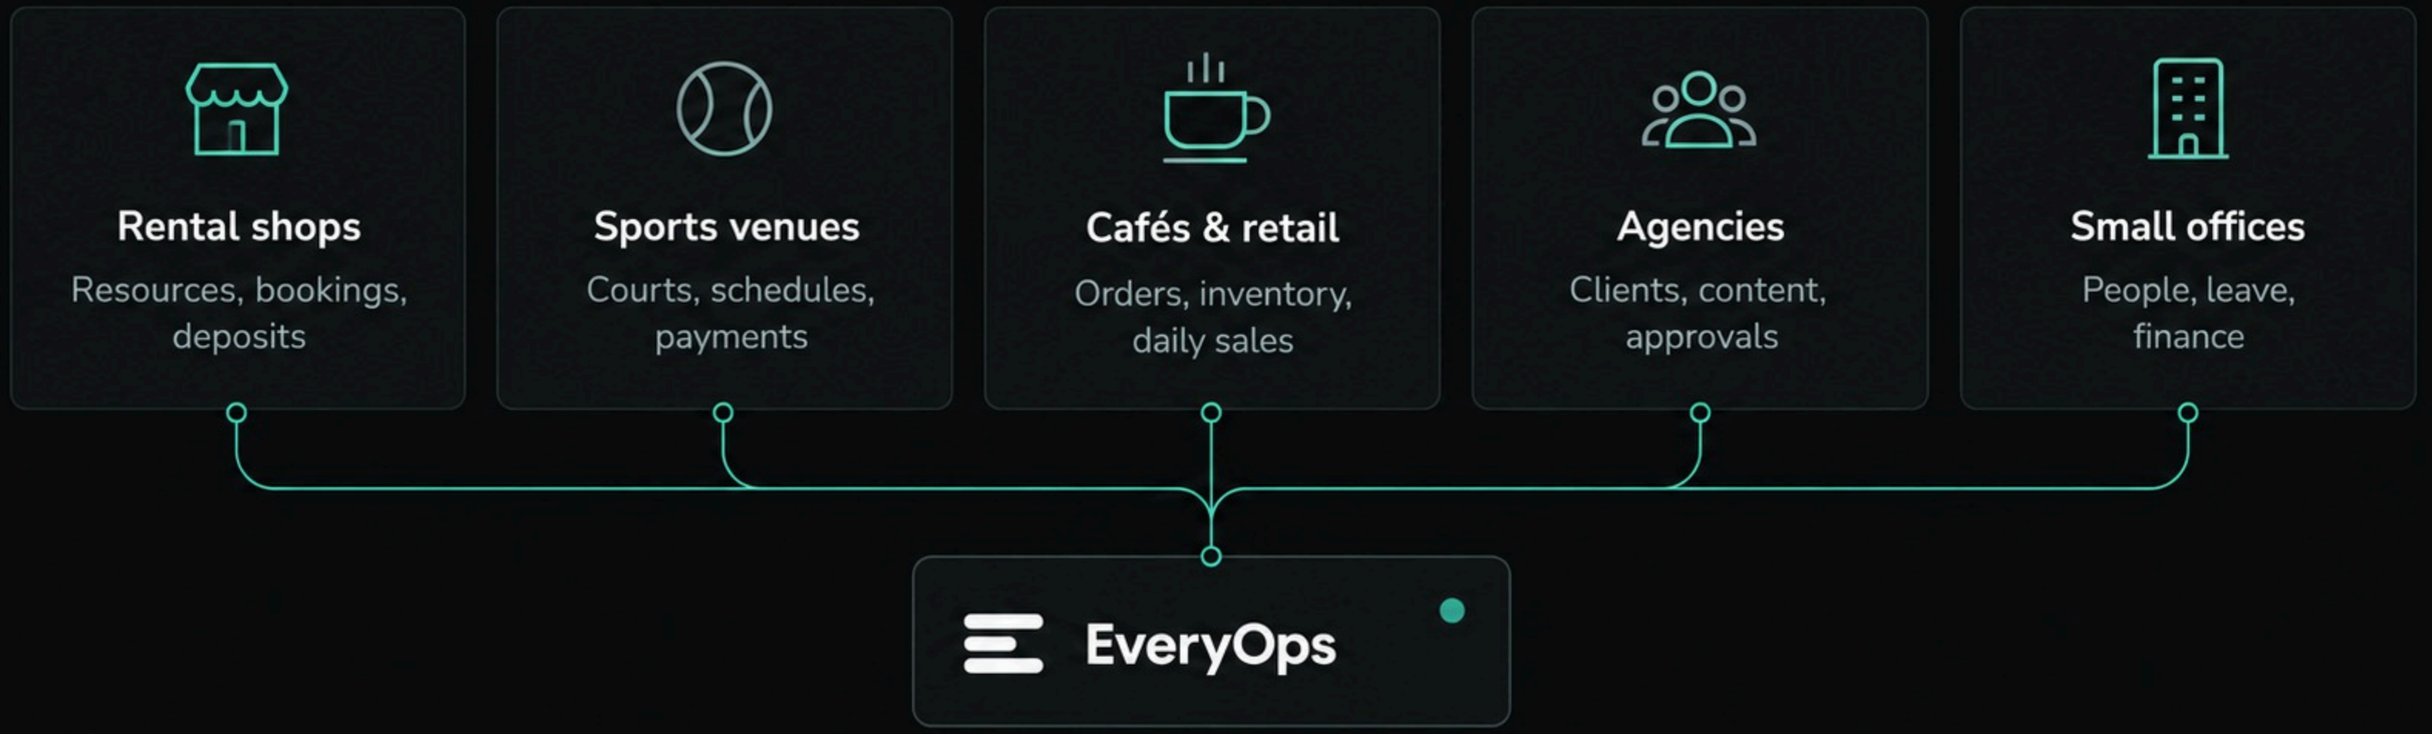

Custom systems take time and money to build and maintain.

Owners know their business. Turning that knowledge into a working system is the gap.

EveryOps

Built for owners who run the work.

Non-technical owners and small teams with evolving operations.

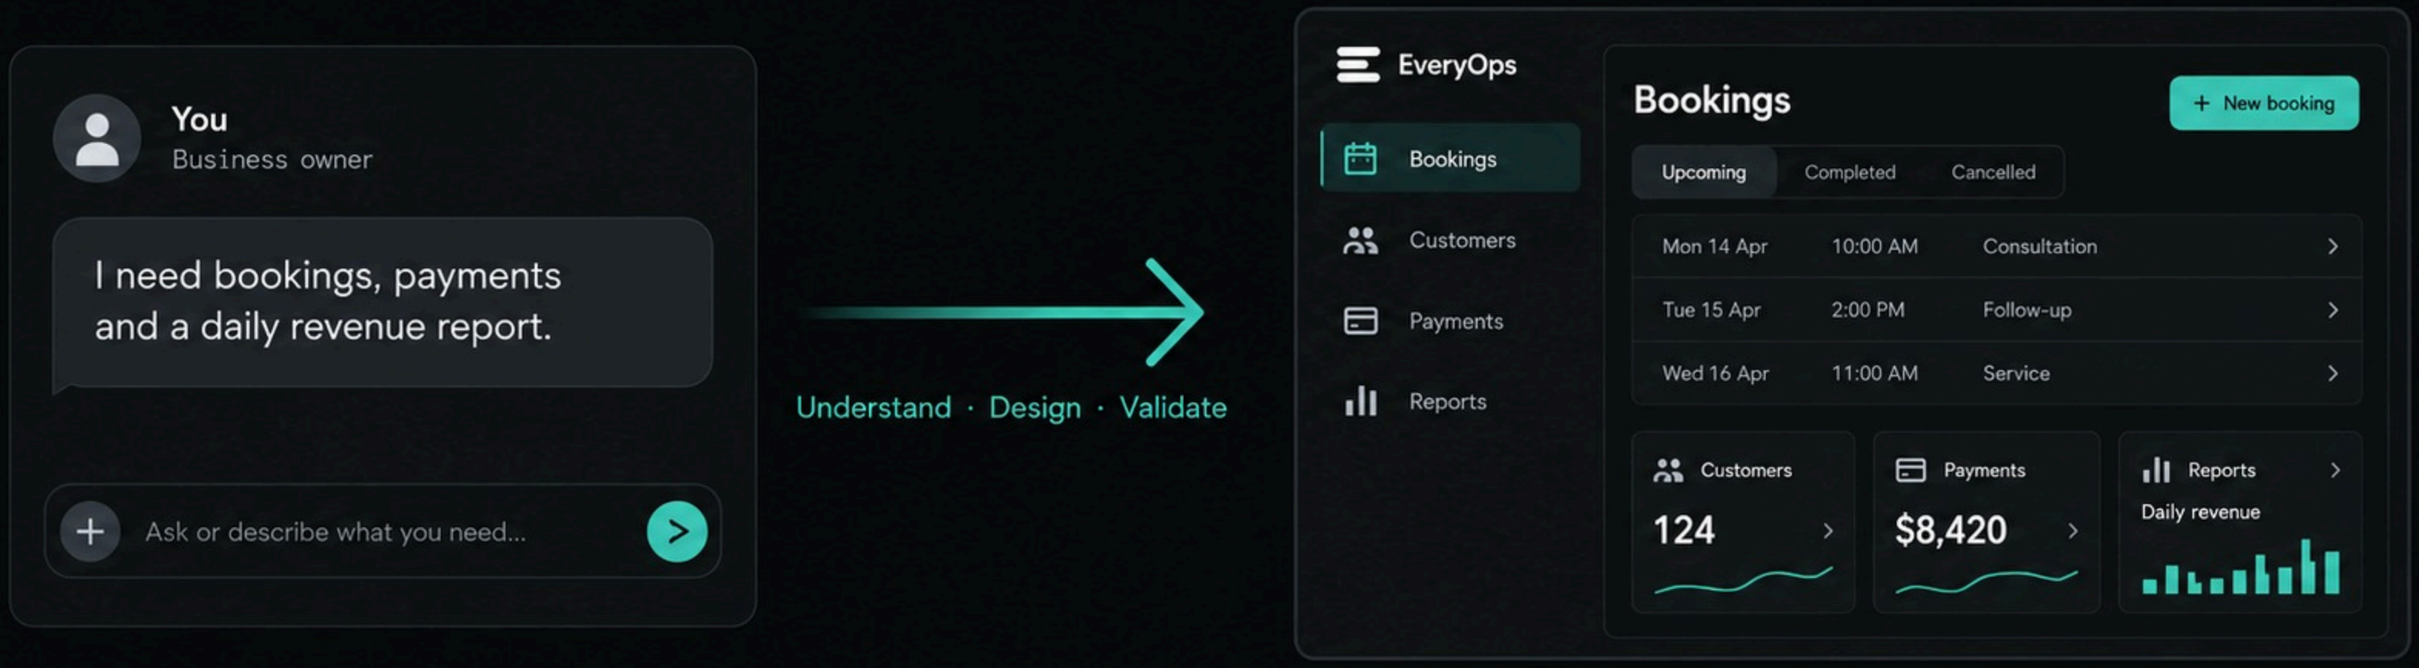

One business can need several systems. They should work together.

EveryOps

Your business. Your systems. One workspace.

Describe how you operate. EveryOps shapes the tools around you.

Shared data

One platform and one shared engine. Each business has its own blueprint.

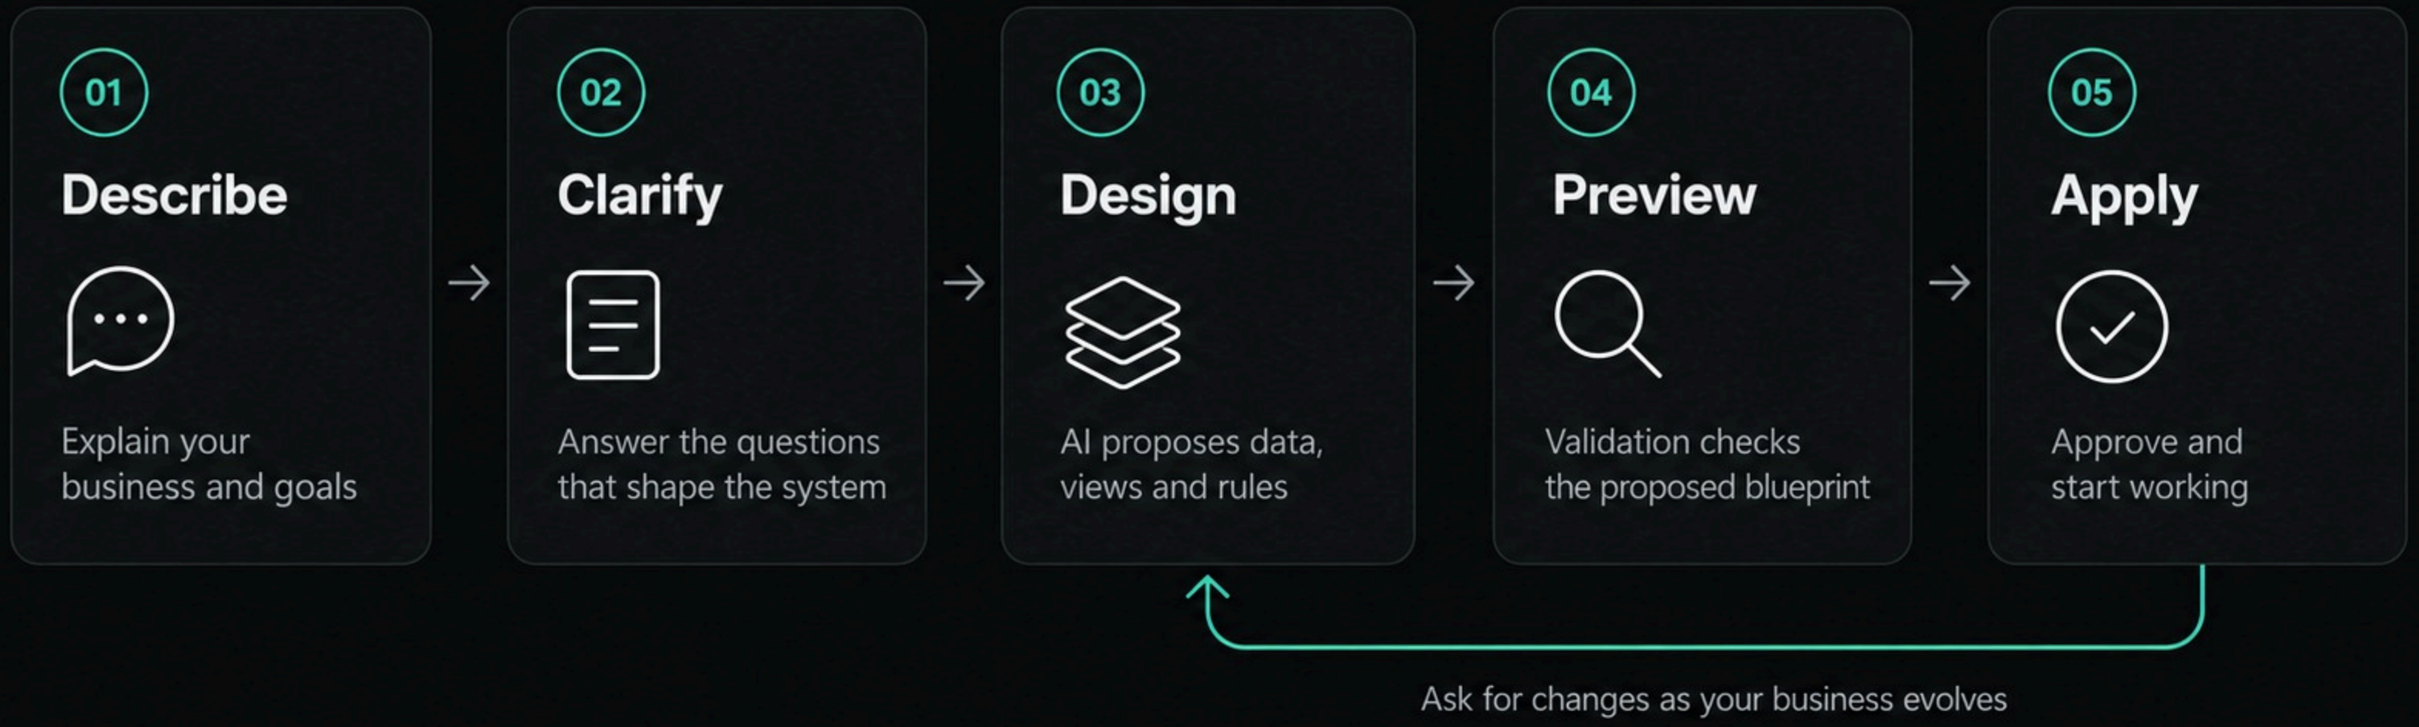

Connected workflows

Your tools work together, automatically.

One place to work

From day-to-day tasks to bigger opportunities.

From a conversation to a working system.

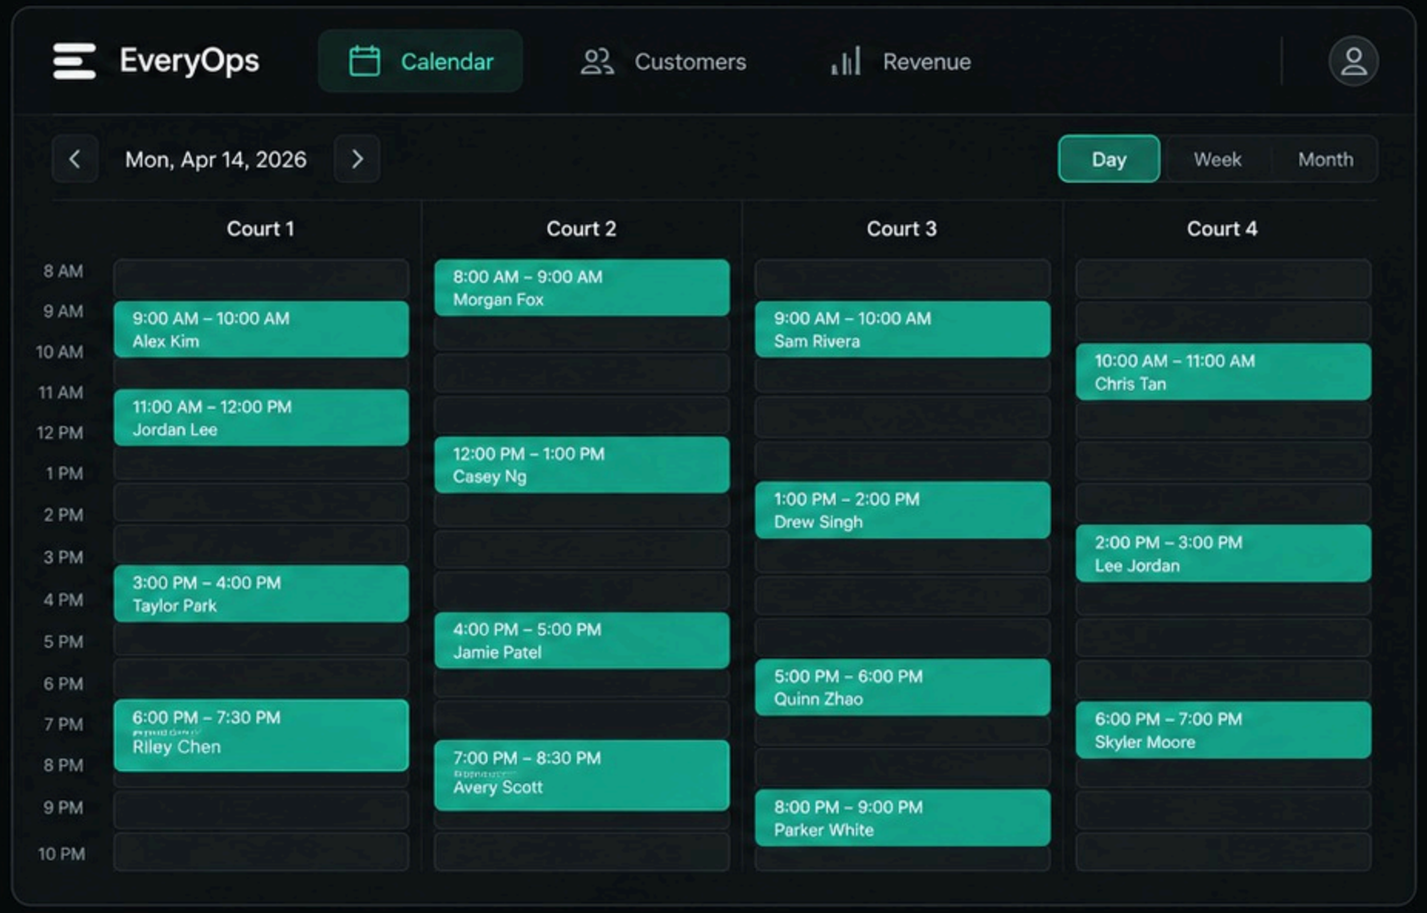

Human approval stays in the loop.

A four-court venue, shaped in minutes.

I run a venue with four courts.
Track bookings and payments.

Add peak-hour pricing after 5 PM.

Booking calendar

Customer records

Pricing & revenue

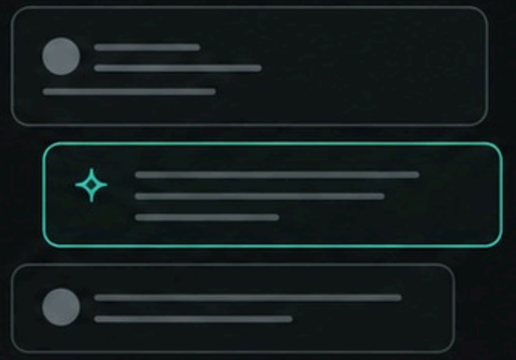

Change request → Preview affected rules → Approve → Updated workspace

EveryOps

A workspace that keeps adapting.

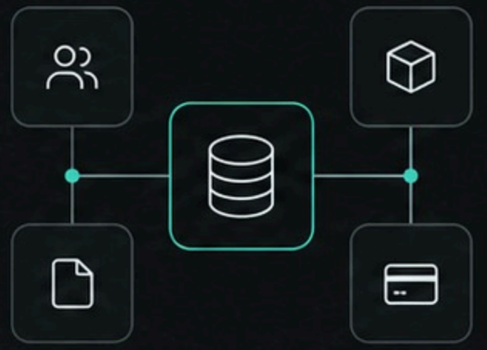

Understands before building

Clarifies the business and states assumptions.

Connects the operation

Customers, resources and transactions share one data model.

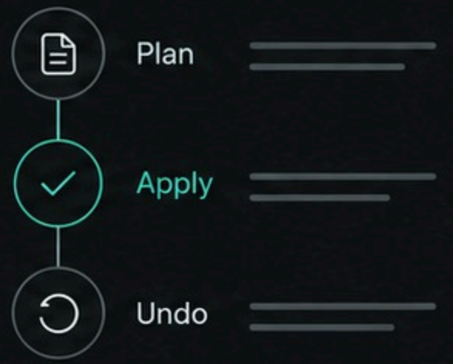

Fits the way you work

The same engine renders tables, calendars, forms and dashboards.

Changes with control

Review a plan, apply it, and undo design changes.

Configuration evolves. The shared platform stays consistent.

Future of Work & Enterprise Productivity

Less coordination. More time for the business.

Faster setup
Turn business knowledge into usable workflows.

Less repeated work
Keep related records and views connected.

Better visibility
Give owners the information to make decisions.

Pilot evaluation targets — not measured results

- Time to first usable workspace
- Duplicate entry per workflow
- Task completion time

AI supports the work. People make the decisions.

EveryOps

Gemini does the design work. Code enforces the rules.

Google AI integration

AI responsibilities

Clarifying questions · Workspace design · Data-aware assistance

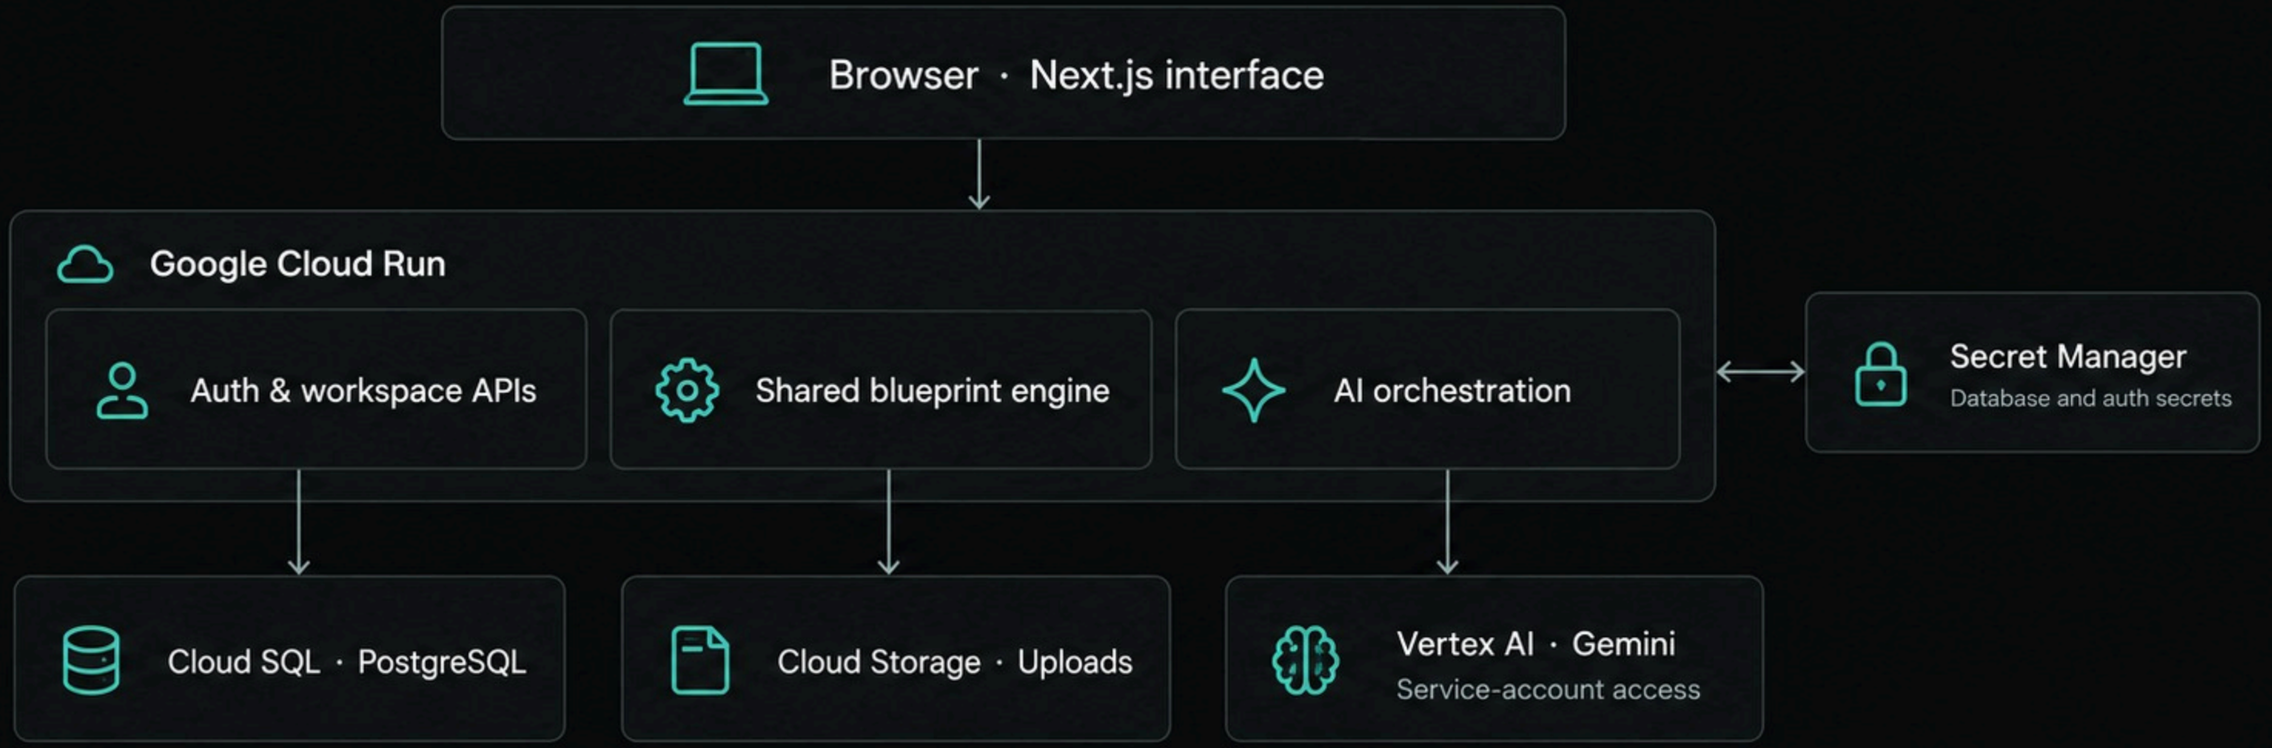

Deterministic safeguards

Role checks · Blueprint validation · Rehearsal on a copy · Repair attempts

Server-side AI calls. Validated configuration. Human-controlled changes.

PROTOTYPE ARCHITECTURE

One engine. Many business workspaces.

Each workspace stores its blueprint and records; shared components render the experience.

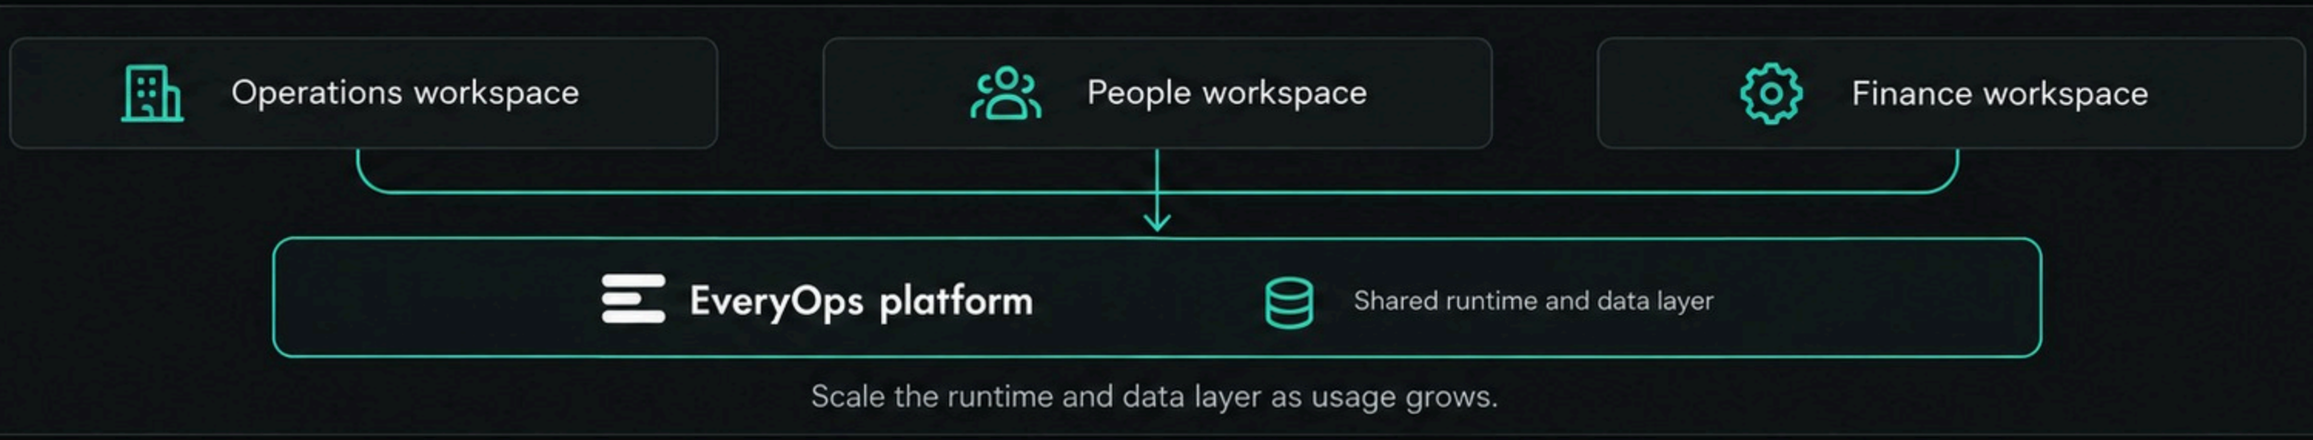

Designed to grow through one shared platform.

Prototype foundation

- Cloud Run deployment
- PostgreSQL workspace persistence
- Role-based access checks
- Validated AI change plans

Next production milestones

- Load tests and database capacity tuning
- Backup and recovery drills
- Monitoring and alerting
- Broader AI evaluations and cost budgets

Scale the runtime and data layer as usage grows.

EveryOps

A workspace for every kind of business operation

1. Sign in and describe your business
2. Answer the setup questions
3. Review the generated workspace
4. Add records and ask for a change
5. Preview, apply and explore the result
